Τα αρχεία που θα λάβετε στα Ελληνικά:

Αριστερά βλέπετε το όνομα του αρχείου και δεξιά την ομιλούμενη φράση

auth-incorrect	Password incorrect. Please enter your password followed by the hash key.
auth-thankyou	Thank you.
pbx-invalidpark	I am sorry, there is no parked call on that extension. Please try again.
privacy-incorrect	I'm sorry, that number is not valid.
privacy-thankyou	Thank you.
privacy-unident	The party you are trying to reach does not accept unidentified calls.
transfer	Please hold while I try that extension.
tt-allbusy	All representatives of the household are currently assisting other telemarketers. Please hold and your call will be answered in the order it was received.
tt-somethingwrong	Something is terribly wrong,
demo-abouttotry	I am about to attempt an Inter-Asterisk Exchange connection to a demonstration server located at Digium. In order for this to work you must already be connected to the Internet. Please wait a moment while I attempt to make the connection.
demo-congrats	Congratulations. You have successfully installed and executed the Asterisk open source PBX. You have also installed a set of sample sounds and configuration files that should help you to get started. Like a normal PBX, you will navigate this demonstration by dialing digits. If you are using a console channel driver instead of a real phone you can use the dial, answer, and hang up commands to simulate the actions of a standard telephone.
demo-echodone	The echo test has been completed.
demo-echotest	You are about to enter an echo test. In this mode everything you say will be repeated back to you just as soon as it is received. The purpose of this test is to give you an audible sense of the latency between you and the machine that is running the echo test application. You may end the test by hanging up or

Asterisk sound files

pressing the hash key.

demo-enterkeywords	<p>Please enter one or more keywords separated by star and then press the hash key.</p>
demo-instruct	<p>If you would like to learn more technical information about Asterisk, dial 2 now. If you'd like to test out the voice-over-IP capabilities of Asterisk, you can dial five-hundred to attempt an Inter-Asterisk Exchange, or IAX connection to a demonstration server at Digium. In order for this test to work, you will need to be connected to the Internet and have at least a twenty-eight-point-eight kilobit modem. To execute an echo test, dial six-hundred. This test is most useful when you have connected to this Asterisk server from a remote location. The sample configuration also has a single user with extension one two three four, and password four two four two. That user is configured to ring the console when their extension is dialed. If you dial one two three four, you can try to ring the console. If the console is busy, or unavailable, you will be given the option to leave voicemail. To check voice mail for the user dial extension eight five zero zero to enter the voicemail system. Finally, you can press the hash key to disconnect from the PBX.</p>
demo-moreinfo	<p>Asterisk is an open source, full-featured PBX and IVR platform that runs on the Linux operating system. For more information visit www.asterisk.org.</p>
demo-nogo	<p>I am afraid I was unable to create a connection to the Digium demonstration Asterisk server. You may find some helpful debugging information on the Asterisk console.</p>
demo-nomatch	<p>I'm sorry there are no matches for those keywords.</p>
demo-thanks	<p>Goodbye. Thank you for trying out the Asterisk Open Source PBX.</p>
